Arpit Patel

Calgary, Alberta | (368) 887-1315 | arpit.patel.gis@gmail.com

Professional Profile

- Completed the academic portion of the program. Proven ability to communicate in a clear and professional manner within the multidisciplinary geospatial community and the public at large
- Results-oriented with ability to apply geospatial project management best practices to ensure successful completion of projects
- Demonstrated proficiency in accurately capturing spatial and non-spatial data from sources and technologies such as Computer-Aided Design(CAD), Remote Sensing(RS), and Global Navigation Satellite Systems (GNSS)
- Excellent critical thinking skills with strong ability to transform and convert geospatial data while maintaining data integrity

Education

Bachelor of Applied Technology Geographic Information Systems

Southern Alberta Institute of Technology (SAIT), Calgary, Alberta

- GPA 3.51/4
- Key Concepts
- GIS Data Capture – utilizing current technologies to plan and document geospatial data structures in single and/or multi-use environment
- GIS Programming – analyzing data using geospatial technology to turn data into information to enhance decision-making processes
- Enterprise and Web GIS – designing, creating, and customizing geospatial decision support tools to optimize efficient workflows
- Cartography and Geovisualization – selecting, using, and integrating appropriate GIS technology to meet industry needs
- Professional Communications – representing and communicating geospatial information in the most appropriate format for audience interpretation

Master of Environmental Science and Technology

CVM University, Gujarat, India

- CGPA 7.41/10
- Key Concepts
- Environmental data collection, validation, and documentation for regulatory compliance
- Air, water, and soil quality monitoring and analysis
- Environmental impact assessment (EIA) support and reporting
- Field data collection and environmental site inspections
- Environmental dataset organization and record management for audits
- Interpretation of environmental monitoring results for decision-making

- Environmental risk identification and mitigation support

Gis Project Experience

Chicago Arson Crime Pattern & Police Network Response Analysis

- Designed and structured a complete project geodatabase with topology rules, domains, and QA/QC standards to enforce spatial data integrity
- Converted raw CSV crime datasets into spatial features using XY Table to Point followed by geometry repair, validation, and georeferencing
- Automated repetitive data preparation using ModelBuilder to minimize manual errors.
- Conducted Hotspot Analysis, Cluster & Outlier Analysis, and Network Service Area analysis (2, 5, 10 minutes)
- Produced professional cartographic outputs with legends, scale, symbology, and metadata for reporting

Capstone Project

Wildfire Risk Assessment & Emergency Routing System —First Nation

- Processed DEM and raster datasets ensuring snap raster, cell size, extent, and projection alignment for spatial consistency
- Performed raster reclassification, normalization, and overlay analysis for wildfire susceptibility modelling
- Integrated Network Analyst to design evacuation routing and emergency response paths
- Developed ArcGIS Online dashboards and web maps for interactive visualization and reporting
- Maintained organized spatial datasets with clear metadata documentation and QA/QC validation

Volunteer Activities

Vice-President (Co-Curricular) September 2025 – Continue
BGIS Club, SAIT, Calgary, Alberta

- Provided support to the President and assumed presidential duties in their absence, including presiding over weekly meetings and supervising executives' activities
- Collaborated with a team of 5 executives to successfully secure financing for the club
- Organized Geospatial Industry Night with industry sponsors (Esri Canada, AltaLIS, Stantec, etc.)
- Designed promotional materials, coordinated logistics, and engaged with industry professionals.

Professional Experience

Trainee Officer (Environmental) Lupin Ltd. Nov 2024 – Aug 2025

- Maintained and organized structured environmental inspection datasets and documentation for audits and compliance reporting
- Led digitization initiatives improving data tracking and documentation efficiency by 20%
- Supported analysis of environmental monitoring records to ensure reporting accuracy

Chemist / Supervisor — Farmson Pharmaceuticals Jul 2023 – Oct 2024

- Collected, recorded, and validated environmental monitoring data (air, water, treatment systems) ensuring data accuracy
- Managed organized datasets supporting environmental compliance under strict timelines
- Maintained detailed documentation used for audits and operational reporting

Project Assistant — IHSS Jan 2023 – April 2023

- Collected field environmental data and performed spatial validation using ArcGIS, improving dataset accuracy by 20%
- Organized environmental inspection evidence files and structured documentation for assessments

Career Interests

Municipal GIS | Environmental GIS | Utility GIS | Asset Management | Spatial Data Integrity | GIS Data Editing | Emergency Management GIS | Infrastructure Mapping | Web GIS Applications
